Every data view handles four states

Loading, slow, empty and error, for the list, the next page, the detail panel and the agent filter. Filters and rows already loaded are never thrown away on failure.

1 · First load · skeleton rows

Shimmer animates; switched off under prefers-reduced-motion. Screen readers hear “Loading events”.

2 · Slow network · after 2.5 s

Taking longer than usual

The activity service is responding slowly. Still waiting (6 s)…

Retry now Cancel

When filters change, the old rows stay visible but dimmed, with a thin progress bar, instead of blanking the table.

3 · No results

No events match your filters

Nothing for “stripe” from **hr-onboarding** with status **Blocked**.

Clear all filters Remove status filter

4 · Couldn’t load · after automatic retries

Couldn’t load events

The activity service returned an error. We tried 3 times.

`HTTP 500 · internal server error`

Try again

Agent filter failed? The dropdown shows “Couldn’t load agents · Retry”; search and status keep working.

5 · Next page failed / end of list

11:41:47.380	billing-assistant	OK	512 ms
11:40:09.006	devops-runner	OK	297 ms
